

Addax Mining Operation Solution (AMOS)

The Addax Mining Operation Solution (AMOS) is a Business Software package developed specifically for the mining industry. AMOS combines key elements of Greentree Business Software with specialised implementation, set up, training and support services to tailor the solution to the unique requirements of mining operations from exploration, to construction and full production.

AMOS includes templates for GL structures, Tenement Management, multi-company / multi-currency consolidation, reporting and data input. The result is a comprehensive business management tool that has been designed specifically to meet the requirements of the mining industry.

From Exploration to Production

Growth from a junior exploration company to a full blown mining operation requires a business management system that can handle tenement management, financials and costing in the early stages, and then expand to meet the demands of construction, production reporting, large scale purchasing, HR, asset management and plant maintenance.

Greentree Business Software is a major component of AMOS. Greentree provides flexibility for mining organisations to incorporate additional functionality as they grow.

During exploration a basic kitbag for financials, payroll and tenement management and reporting is all that is needed. When moving to construction and production it is easy to build in the additional modules required. This can include Job Cost, Inventory, Purchase Orders, Payroll, Human Resources, Occupational Health and Safety, Field Service, and Asset Maintenance Management. Assets can be tracked wherever they operate throughout their working life and maintenance cycles can be created and scheduled either by time or by usage.

Tenement Management

Tenement Management Reporting from standard accounting systems can be difficult and cumbersome, often resulting in inaccurate reports that are time consuming to produce. Greentree Business Software meets all the requirements of managing Tenement reporting through a flexible “Transaction Analysis” process. This process sits on top of an uncomplicated General Ledger chart structure. Greentree can also capture and store statistical information such as metres drilled or assays processed.

Reporting

If your business focus and company goals include profitability for shareholders, effective cost control, concise board reporting and comprehensive operational reporting then AMOS is

the business management solution you’ve been looking for. Reporting includes standard reports that can be customised to suit your requirements, and business intelligence tools that even the most non-technical managers can use to graphically see trends on productivity and profitability.

If your organisation outsources services, Greentree Business Software offers facilities for tracking and managing costs, and maintaining control at both operational and management reporting levels. The unique “Transaction Tree” feature of Greentree provides excellent analysis capabilities for complex management and statutory reporting requirements.

In addition, Greentree Software easily integrates with Microsoft Excel for financial and management reporting, budget updating, and data upload/download. Complex calculation models can be developed in Excel, with the results automatically uploaded into the Greentree system.

“The ability to add Finance, Purchasing and other relevant functions once we got into the Construction phase and then subsequent functions such as HR, Payroll, Maintenance etc as we’ve evolved into the Production phase, has been invaluable.”

Andrew Thomson, General Manager, Mupane Gold

“Growing the capacity of the mine would be piecemeal so the ability to add functionality ‘as required’ worked perfectly.”

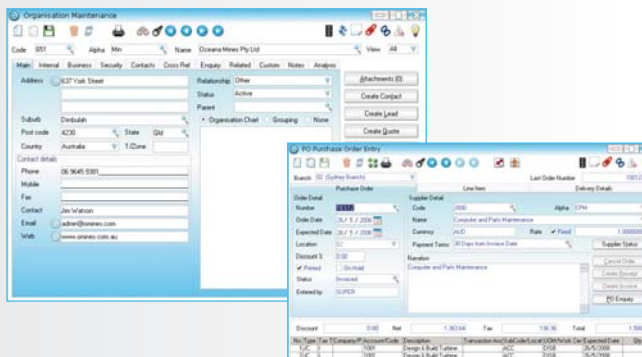

Andrew Thomson, General Manager, Mupane Gold

AMOS for Exploration

At the exploration stage Greentree will manage all the financial transactions as well as the costs for Tenement Management. As the company grows then Purchasing and Payroll functions can be added.

- Tracking costs across multiple tenements
- Statutory and Management reporting
- Managing Purchasing and Payables
- Managing Foreign Currency requirements
- Consolidations for reporting
- Payroll (if required)

AMOS for Construction

During a construction phase, additional requirements may include Inventory, Job Cost, Occupational Health & Safety, Human Resources and Requisitions.

- Tracking costs against budget
 - Job Cost
 - Transaction Analysis
- Managing procurement processes
- Managing inventory (including first-fill)
- Payroll (if required)

AMOS for Production

With the mine in production the Asset Management/Planned Maintenance and Production reporting can be implemented. The end result is a fully integrated business system.

- Inventory Management
 - Warehouse
 - Stockpile & WIP (GIC)
 - Product Shipments
- Managing Procurement Processes
- Plant Maintenance
- Financial Reporting and Budget/Forecasts
- Reporting Physicals and Daily/Monthly Production
- Payroll and HR

Benefits at a glance...

Knowledge and Experience - Addax understands the unique requirements of mining operations, resulting in smooth implementation and meaningful ongoing support.

Designed Specifically for the Mining Industry - AMOS includes templates for GL structures, Tenement Management, multi-company / multi-currency consolidation, reporting and data input.

Comprehensive Reporting - excellent reporting and analysis capabilities for complex statutory and management requirements.

Tenement Management Functionality - manage and report on tenement holdings and Form 5 submissions easily and effectively.

Maintenance Scheduling function - delivers in many hours of additional up-time

Flexibility to add functionality ‘as required’ - meaning you will only buy the functionality you need. AMOS also allows the flexibility to add additional functionality as your business grows.

Fully Integrated - easily integrates with Microsoft Excel for financial and management reporting, budget updating, and data upload/download, removing the need for 3rd party systems or complex, expensive customisation.

About Addax Business Solutions

Dedicated to delivering quality business solutions, Addax has provided both Australian and international companies with comprehensive and effective business solutions and strong customer support for more than 15 years. In particular, the Addax team has extensive experience with mining companies. Our consultants work with head office staff and mining operations personnel to provide the best business software solution.

With offices in Perth and Sydney, Addax combines the experience and skills of a dedicated team of business systems architects and consultants with the most advanced application software to deliver the best business system for your organisation.
