

# AMOS Fact Sheet

## Tenement Management

### Finally... A real solution

No two mining operations are the same but when it comes to Tenement Management, the requirement to track costs and produce statutory and management reports is universal.

Recognising the need for mining companies to manage and report on tenement holdings and submissions easily and effectively, Addax Business Solutions developed AMOS' dedicated Tenement Management Module.

### AMOS Tenement Management

AMOS (Addax Mining Operation System) is a solution package combining key elements of Greentree Business Software with specialised implementation, set up and training services. The result is a business software solution specifically tailored to the mining industry. The Tenement Management component of AMOS is integrated with an uncomplicated General Ledger chart structure. The system can also record physical information such as metres drilled or assays processed.

Whether you are a mineral exploration or mining company requiring tenement management, or an oil and gas exploration or production company managing permits, AMOS' Tenement Management module meets all the requirements of maintaining Tenements through a system that is very flexible, yet simple to use.

### Benefits for you:

**Integrated Solution** eliminates the need for 3rd party Tenement Management software.

**Significantly improve administration functionality and reduces errors** through integration with Greentree's General Ledger, Accounts Payable and Cash Management.

**Improve efficiency for administration and reporting** through the comprehensive date system and automatic alerts.

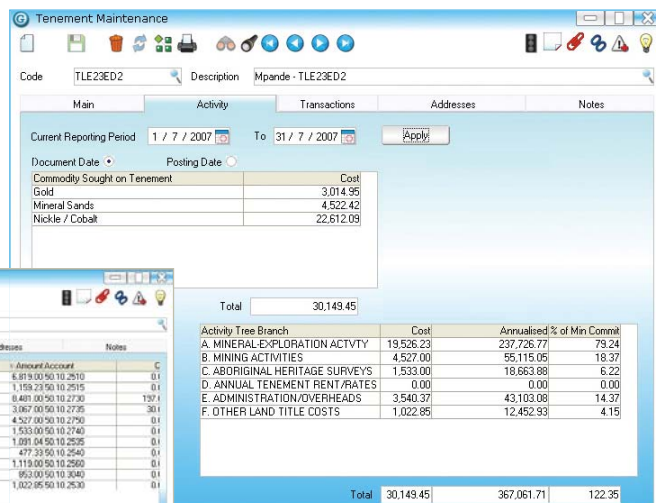

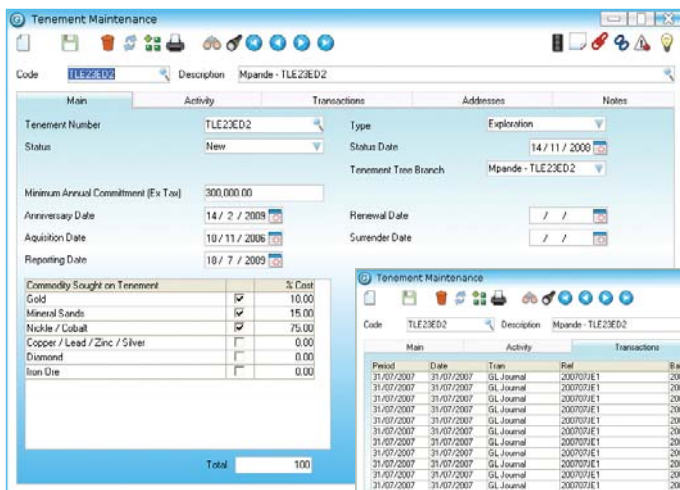

**Reduce administrative overheads** through easy creation and modification of new tenements.

**Automatic production of Form5 financial and physical information.** This information can be taken from the system and automatically inserted into appropriate areas of the Form5 report.

**Create and produce new reports with ease** through the use of tree structures for flexibility in reporting formats.

**Easily formatted Management Reports** are available for the board, senior management and other operation groups through the use of Excel as a reporting option.

**Respond to queries, enquiries or issues quickly and efficiently** utilising AMOS' full audit trail provided by Tenement Management module's transaction history.

## Features at a glance...

### Tenements

- Exploration
- Mining
- Oil and Gas - Permits

### Costs / Expenditure (Financials)

- Capture actual costs from transactions processed in other areas of AMOS
- Creating budgets
- Accumulating costs and expenditures against commitments

### Physicals

- Recording physical information including drilling type, assays, and metres
- Build up data for KPIs

### Record Milestone Dates

- Anniversary
- Renewal
- Acquisition
- Surrender
- Reporting
- Entered date range

### Transaction History

- All transactions kept for the life of the system
- Enquiry within specific Tenement transactions across multiple date or financial periods
- Drilldown into transaction detail

### Summary levels

- No limit on the number of summary levels
- Applicable for both enquiry and reporting

### Budgeting and Forecasting

- Unlimited budgets
- Re-forecast as required
- Budget and re-forecast uploaded from Excel

### Commitment

- Enter and modify Tenement Commitment
- Reporting of actuals against Commitment

### AMOS & Greentree Business Software

Addax Mining Operation System (AMOS) is a solution package combining key elements of Greentree Business Software with specialised implementation, set up and training services to tailor the solution to the mining industry.

Greentree Business Software is a major component of AMOS. Greentree can be implemented progressively to parallel the growth stages of a mining company. The result is a business management solution that has been designed specifically to meet the requirements of mining companies from Exploration to full Production.
